

The Hospitality 360SM way: NTN GuestCall[®]

INTERACTIVE ENTERTAINMENT

SOFTWARE SOLUTIONS

It's amazing how many ways your staff can mispronounce a guest's name. And a public-address system might be fine for train stations, but it doesn't do a lot for restaurant ambience. Ditto for shouting. Of course, you could always install a number board, and hope your guests don't mind keeping tabs on things.

NTN GuestCall[®] paging systems manage incoming customers efficiently and distinctively, instantly notifying them when their table is ready, creating a more welcoming, organized atmosphere. Customers can relax at the bar without the fear of missing their table. Meanwhile, you eliminate long lines of bored or frustrated guests, smooth the overall flow of traffic, and accelerate your table turns.

It's just one of the many ways Hospitality 360 is changing the industry, providing a wide range of products to increase your revenue, enhance the guest experience, and improve your bottom line.
